

BCS FOR INDUSTRIAL HEALTH

Globalization means that industrial health and safety is becoming ever more important. However, complying with national and international regulations is only one part of the multitude of tasks involved in health and safety.

Our Industrial Health Services help you with your daily business. We have developed efficient solutions to take care of time-consuming routine activities and our experts can provide the right answers to specialized questions.

BCS for Industrial Health

Industrial health and safety is of key importance in every company. Ensuring safety in the workplace helps to avoid accidents, lower sickness absence and reduce stoppages. Operating in compliance with regulations minimizes financial risks. Compliance in health and safety is therefore an important prerequisite for corporate success. But for in-house health and safety officers the task of achieving and maintaining regulatory compliance is becoming more and more complex. The reasons are manifold:

- the amount of regulation for health and safety is increasing all the time,
- in-house service providers face growing cost pressures,
- product portfolios are being revised at an increasingly fast rate,
- corporate internationalization brings additional work,
- customers are placing ever greater demands on the quality of communication and documentation.

Our Industrial Health Services offer health and safety packages that ensure regulatory compliance and efficiency. We help you with all of your work, whether it involves simply implementing new regulations or large-scale tasks such as managing supplier safety data sheets. Our services give you and your colleagues more time to develop cutting-edge health and safety practices.

INDUSTRIAL HEALTH SERVICES:

- Data Management for Hazardous Substances
- Compliance Consulting Services
- Health and Safety Management

DATA MANAGEMENT FOR HAZARDOUS SUBSTANCES

If safety data sheets (SDSs) are to ensure that hazardous substances are handled appropriately, they need to have the correct information and be available where they are needed. We help you with request management, validation, and drawing up operating procedures and hazard assessments.

REQUEST MANAGEMENT

We request supplier safety data sheets from manufacturers. All incoming SDSs are checked for quality, and a monitoring stage for returns completes the request process. So as to ensure that SDSs are consistently kept up to date, each manufacturer is regularly asked to update their sheets.

VALIDATION

Safety data sheets often contain insufficient or contradictory information, so we validate your SDSs, taking into account applicable regulations and directives.

DRAWING UP OPERATING PROCEDURES

Our quality-assured procedures transfer all relevant content from safety data sheets into our back-office system. The structuring this provides, used in conjunction with stored regulatory data and a catalogue of phrases, allows us to compile all the requested documentation (e.g. operating procedures) efficiently and in compliance with regulations.

DRAWING UP HAZARD ASSESSMENTS

Using the data we have extracted from supplier safety data sheets and checked, we determine the substance protection level, thus establishing a basis for the development of hazard assessments. As part of our compliance consultancy services, we can also offer to carry out hazard analyses.

OUR SERVICE MODEL

Our fast, efficient and high-quality services are founded on IT solutions and expertise from TechniData.

SERVICE PORTAL

The BCS service portal offers you a platform that will enable direct access to all information.

- Service tracking
- Data and documents on demand
- Help desk
- Data exchange

BUSINESS PROCESS INTEGRATION

Companies using SAP can seamlessly integrate our services into their solution. We can supply data and documentation in various formats for users who employ other ERP systems:

- delivery via e-mail or on CD (small amounts of data)
- Internet access to a secure area in our back-office system
- ALE distribution (only for SAP EH&S users)

COMPLIANCE CONSULTING SERVICES

Knowing which regulations apply is a prerequisite for health and safety compliance. However, how these regulations are implemented is decisive in ensuring that regulatory compliance is efficient and remains valid over the long term.

Our compliance check helps you to establish your compliance profile. We tell you which regulations are relevant to you and analyze the extent to which these are being implemented in your company. We support you in introducing necessary measures efficiently and in full compliance with regulations. Our Industrial Health Services ensure you are kept up to date on amendments made to regulations.

We also support you in implementing tasks relating specifically to health and safety regulations, such as when new laws come into force.

HEALTH AND SAFETY MANAGEMENT

Management systems such as those according to OHSAS 18001 create the organizational prerequisites for sustained health and safety. Such systems represent a long-term tool for prevention and the improvement of health and safety. However, the cost-effectiveness of efficient accident prevention also raises the popularity of these systems with users.

Why not use our experience to introduce and integrate an effective and efficient health and safety management system.

THE FIRST STEP TOWARDS REGULATORY COMPLIANCE AND EFFICIENCY IN HEALTH AND SAFETY

The advantages of Industrial Health Services at a glance:

- **Compliance**
Use our expert know-how to ensure compliance. We will supply you with information that complies with regulations and that will help you reduce risks for your company.
- **Cost-effectiveness**
We implement your health and safety tasks so that you can seamlessly integrate them into your business processes. Our procedural model, based on best practices, ensures the highest levels of efficiency and effectiveness. We create synergies that you can benefit from.
- **Flexibility**
Health and safety requirements vary. New laws, technologies, and even ingredients create additional challenges. Use our services to suit your needs. We will react quickly and reliably to your requirements, providing you with service on demand – as and when you need it.
- **Scalability**
Do you want us to handle only request management, or the whole of your hazardous substance data management? It's up to you. We'll tailor our services to your needs.

Our health and safety and hazardous substance experts are at your complete disposal.
