

BCS FOR DANGEROUS GOODS

Throughout the world, the transport of chemical products is closely associated with stringent safety obligations. Dangerous goods need to be classified and accompanied by the appropriate documentation. The requirements and workloads involved in meeting all these regulations continue to grow. Our portfolio of services provides effective support in satisfying these requirements.

BCS for Dangerous Goods

The shipping of (chemical) products is controlled by a multitude of national and international laws and Dangerous Goods Officers therefore need to know all of the regulations that apply to carriers in any particular region or legal system. As in-house service providers, they are responsible for ensuring that regulations are complied with. Yet the demands placed on Dangerous Goods Officers are continuously growing as:

- companies enter new markets and regions,
- product portfolios are revised and expanded at an ever faster pace,
- governments and commercial bodies amend laws and introduce new ones,
- in-house service providers face cost pressures,
- customers place ever greater demands on the quality of communication and documentation.

Use our Business Compliance Services for Dangerous Goods to make sure that your shipping is fully compliant with regulations. TechniData BCS ensures regulatory compliance and efficiency.

CLASSIFYING DANGEROUS GOODS

Based on classification criteria such as composition, physical/chemical properties, and packaging information, our experts can classify dangerous goods for all relevant regions, legal systems, and carriers. We classify your dangerous goods in accordance with regulations such as ADR, RID, ADNR, IMDG, IATA, CFR, TDG, ADG, China List of Dangerous Goods, List of dangerous goods (GB12268-2005) and Classification and code of dangerous goods (GB 6944-2005), Taiwan Rules on Road Traffic Safety, and other country-specific regulations.

SUPPORT FOR LABELING DANGEROUS GOODS AND DRAWING UP TREMCARDS

Based on dangerous goods classification and information on primary and secondary packaging we help you to draw up accident procedure sheets and label dangerous goods by providing structured substance data. We also use the official languages of your target markets, from A for Australia to Z for Zambia.

COMPLIANCE CONSULTING SERVICES

Full compliance entails both knowing all the relevant laws and implementing regulations so that they intermesh smoothly with operating processes.

We analyze your processes, determine your compliance requirements and help you to implement dangerous goods regulations.

If required, our experts can also take on the responsibilities of Dangerous Goods Officers. Our Compliance Consulting Services support you with all tasks related to dangerous goods.

DANGEROUS GOODS SERVICES:

- Classifying dangerous goods
- Support for labeling dangerous goods and drawing up TREMCARDS
- Compliance Consulting Services

OUR SERVICE MODEL

Our fast, efficient and high-quality services are founded on IT solutions and expertise from TechniData.

SERVICE PORTAL

The BCS Service Portal offers you a platform that helps you transfer dangerous goods information to us, monitor the status of processes, and exchange information with us efficiently – all at the click of your own mouse.

The Service Portal comprises:

- Service tracking
- Data-on-demand
- Help desk
- Data exchange

BUSINESS PROCESS INTEGRATION INTO SAP SOLUTIONS

Because we merge specialist services with information technology, companies operating SAP solutions such as mySAP ERP can seamlessly integrate our services into their system. We maintain dangerous goods information in structured EH&S-compliant form in your SAP solution, enabling you to process the data directly in downstream business processes such as development, production, sales and shipping.

BUSINESS PROCESS INTEGRATION INTO OTHER ERP SYSTEMS

If you use a different ERP system to manage your business processes, we can supply information in the following formats:

- XML

Data and documentation are supplied in XML format, so that you can easily integrate them into your IT systems.

- PDF

We supply all the documentation you require in PDF format either by e-mail or on CD.

- Application Service Providing (ASP)

If you do not have your own EH&S solution, we provide access to a high-performance IT application that will efficiently manage information, enabling you to feed it into your business processes.
