

IUCLID HOSTING FROM THE FLEXCLOUD

Take advantage of our all-round carefree

The European Chemicals Agency ECHA provides companies with various software applications. The central tool is the internationally uniform database IUCLID.

IUCLID is used to collect data on chemical substances and to prepare dossiers, e.g. for REACH, the Biocidal Product Regulation or the OECD HPV programme. Version 6 (IUCLID 6) of the free software application has been available since June 2007.

Further ECHA applications are the software tool Chesar and the QSAR Toolbox.

TechniData TCC Products takes over the operation of your IUCLUD and Chesar applications for you as a complete hosting package.

If you wish, you can order the hosting of the QSAR Toolbox as an additional service.

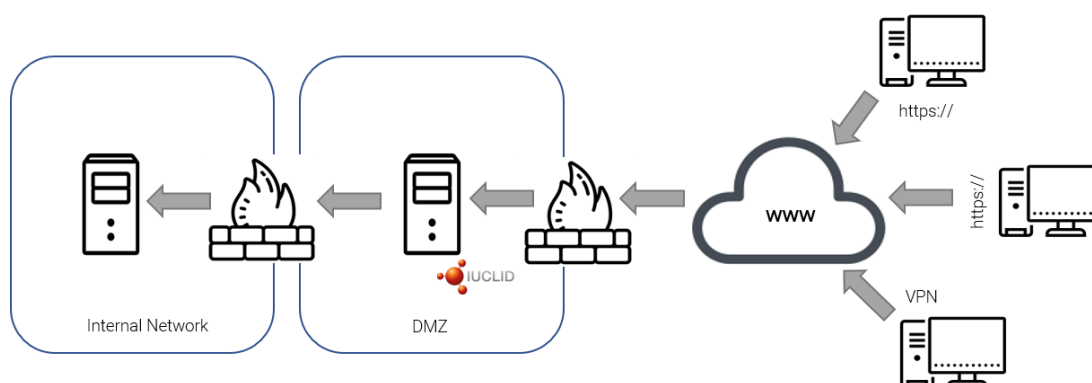

AT A GLANCE

SERVICES

- IUCLID und Chesar Hosting
- additional: QSAR Toolbox Hosting

BENEFITS

- all-round carefree package and thus more time for your core tasks
- maximum safety
- personal contact persons
- calculable costs (fixed price)

SERVICES/ TECHNICAL SPECIFICATIONS

- Installation and operation of an individual Tomcat application server for IUCLID 6 and Chesar in a dedicated virtual system
- the virtual system is operated in a fail-safe cluster infrastructure (two virtual processors, 6 GB main memory, 6 GB server)
- Storage of application data in a Derby network server database
- 50 GB storage capacity in the database (30 GB for data, 20 GB for log files)
- Protection of the customer's system through a redundantly designed firewall
- Redundant Internet connection
- Regular maintenance of operating system and application
- Regular data backup
- Continuous system monitoring
- Automated alarm and escalation management in the event of an error
- System availability: 99.5%.
- ServiceDesk from 8:00 to 18:00 (weekdays)
- Optional: Access via Site-to-Site-VPN or Terminal Service possible
- On request, we also take over the operation of the QSAR Toolbox as a separate additional service

ECHA-APPLICATIONS AT A GLANCE

- **IUCLID** (International Uniform Chemical Information Database) collects, stores, maintains and exchanges data on the inherent and hazardous properties of chemical substances.
- **Chesar** (Chemical Safety Assessment and Reporting) is an application for Chemical Safety Assessment (CSA) and Chemical Safety Report (CSR).
- The **QSAR Toolbox** enables the chemical industry to close data gaps in toxicity data needed to assess chemical hazards.

TESTING SYSTEM

Test a fully functional IUCLID environment **free of charge and without obligation for 4 weeks** and convince yourself of the advantages. There are no obligations for you. At the end of the trial period, all data will be deleted automatically and securely.
